# ***INFORMED CONSENT FOR MRI, WITH OR WITHOUT CONTRAST INJECTION***

**Patient Name:** \_\_\_\_\_ **Medical Record #:** \_\_\_\_\_

**TO THE PATIENT:** You have the right to be informed about your condition and the recommended surgical, medical or diagnostic procedure to be used so that you may make the decision whether or not to undergo the procedure after knowing the risks and hazards involved. This disclosure is not meant to scare or alarm you. It is so that you may choose to give or withhold your consent to the procedure.

If you are pregnant or think that you may be pregnant, please inform the technician at once. It is very important that you inform the technician if you have heart valves, a pacemaker, aneurysm clips or other implanted metallic or electrical devices.

Your physician has requested that we perform a **MAGNETIC RESONANCE IMAGING (MRI)** examination to obtain additional information. **MRI** uses a magnetic field and radio waves to produce an image of the internal body parts being examined. **MRI** is painless, and does not use x-rays or radiation. The only discomfort involved would be having to lie quietly in a confined space during the study. Because the **MRI** is a diagnostic procedure, it provides information that may aid your physician in diagnosing and treating your medical condition. Without the **MRI** scan, accurate diagnosis and proper treatment may be delayed.

As part of your **MRI**, a contrast agent may be injected into your vein in order to produce better images of the part of your body that is being examined. The **MRI** procedure may be conducted without the injection of the contrast agent, but the images may not be as helpful to the radiologist and your physician. If you wish to refuse the contrast injection, inform the technologist and the **MRI** will be conducted without the contrast agent.

**POTENTIAL RISKS – THE FOLLOWING COMPLICATIONS ARE POSSIBLE:** Anytime an injection is given, there is potential for pain, bleeding, bruising or swelling at the injection site. **MRI** exams requiring contrast may result in mild headache, nausea, and itching or other vague symptoms for a short time after the injection. Additional allergic reactions in response to the contrast agent may include hives, shortness of breath or difficulty swallowing. There have been rare instances of death after the administration of the contrast agent. **IT IS VERY IMPORTANT THAT YOU INFORM THE TECHNOLOGIST IF YOU EXPERIENCE ANY OF THE CONDITIONS MENTIONED IN THIS FORM.**

**NOTE TO PATIENTS:** If you have previously had a **REACTION** to a contrast injection such as hives, severe itching, shortness of breath and/or any significant reaction requiring hospitalization, a history of **ASTHMA** or other **ALLERGIC CONDITIONS**, any history of **SICKLE CELL ANEMIA** OR **KIDNEY DISORDER** are **PREGNANT OR BREAST-FEEDING**, you **MUST** inform the technologist. The safety of contrast for children under the age of 2 has not been established.

There may be other imaging alternatives, however your physician believes the **MRI** to be the best diagnostic test for you, considering your symptoms and condition. The benefit of this exam is to assist your physician with a diagnosis.

\*\*\*\*\*

I have been informed that there may be an additional charge as we do send our **MRI's** to an outside radiology service. We cannot guarantee these radiologists will be contracted with your insurance plans.
